

IMPORTANT

1. Always include complete heater model and serial number so that any specification change can be considered for parts shipment. It can save time and expense.
2. Specifications subject to change without notice.
3. We reserve the right to substitute functional replacements.
4. Order by Part Number. Do not order by Option Number.

ELEMENTS IN SERIAL NUMBER

- Element 1:** Determine date of manufacture.
- Element 2:** To determine type of safety pilot or pilot system used.
- Element 3:** To determine type of electric valve used.
- Element 4:** Type of gas that heater was built to burn.
D= Dual fuel, natural and propane
L= Propane
N= Natural
- Element 5:** Consecutive number of heater made. Used for identification purposes only.

Models CXL, CXLB, CEEXLB are also equipped with "V" shaped tube baffles. When replacing heat exchangers in these models, check to see if the "V" baffle can be salvaged. If they cannot be salvaged, it will be necessary to order "V" type baffles, Code No. 78, page 14.

If replacement heat exchangers are for Canadian Models, see Code No. 79, page 14.

79. HEAT EXCHANGER BAFFLES FOR CANADIAN MODELS

Canadian XL 125 through 400 units were originally equipped with a vertical baffle and a horizontal baffle, as shown below. When replacing heat exchangers on Canadian XL units, check to see if the vertical and horizontal baffles can be salvaged. If not, it will be necessary to order these baffles as indicated below and to field-install same in the replacement heat exchanger, as they cannot be factory installed.

INSTRUCTIONS for connecting ignitor lead on replacement spark pilots Code 106

1. Identify the ignitor wire attached to the pilot electrode. Slip the 90° protective boot on to the wire, as illustrated.
2. On the "open" leg of the 90° crimp-on terminal (P/N 112647), locate a flat, triangular spike tab pre-punched in the metal. With the tip of a small, straight screwdriver, force the spike tab toward the inside of the connector. Straighten the tab to a vertical position.
3. Insert the ignitor wire into that same connector leg (just to the 90° bend) and push the wire onto the protruding spike tab, making sure that the tab penetrates the insulation. (Do not strip the ignitor wire.) Using a crimping tool or pliers, squeeze the sides of the terminal to form a "C" shape. The ignitor wire should now be firmly held by the terminal.
4. Slide the protective boot over the terminal. Holding the boot, attach the 90° Rajah terminal to the ignitor lead Rajah connector on the Model G60 or G67BG/NG-2 Ignition Controller.

REPLACEMENT VALVES — For additional information on control valves, safety pilots and ignition systems, see Form 714.
