59TN6C Infinity® Two-Stage, Variable Speed, 4-Way Multipoise, Condensing Gas Furnace

Product Data

A11263

Representative drawing only. Some product models may vary.

WARNING

CARBON MONOXIDE POISONING AND FIRE HAZARD

Failure to follow this warning could result in personal injury, death, and/or property damage.

This furnace is not designed for use in recreation vehicles, manufactured (mobile) homes or outdoors.

Failure to follow this warning could result in personal injury, death, and/or property damage.

The 59TN6C Multipoise Variable Speed Condensing Gas Furnace features the two-stage Infinity® System. The Comfot Heat® Technology two-stage gas system is at the heart of the comfort, provided by this furnace, along with the Infinity variable--speed constant airflow ECM blower motor, and two-speed inducer motor. With an Annual Fuel Utilization Efficiency (AFUE) of up to 96.7%, the Infinity two-stage gas furnace provides exceptional savings when compared to a standard furnace. This Infinity Gas Furnace also features 4-way multipoise installation flexibility, and is available in six model sizes. The 59TN6C can be vented for direct vent/two-pipe, ventilated combustion air, or single-pipe applications. A Carrier Infinity Control and Infinity Air Conditioner or Heat Pump can be used to form a complete Infinity System. All sizes can be installed in air quality management districts with a 40 ng/J NOx emissions requirement. All sizes are design certified in Canada.

PERFORMANCE

- Communicating variable-speed, constant airflow (VCA) ECM blower motor for electrically efficient operation all year long in heating, cooling and continuous fan operation
- Two-speed inducer motor, and two-stage gas valve.
- Power Heat[™] Silicon Nitride Hot Surface Igniter.
- Ideal Humidity System[™] technology can dehumidify a home without a call for cooling.
- Integral part of the Ideal Humidity® System Technology.
- ComfortFan[™] technology allows control of continuous fan speed from a compatible thermostat.
- SmartEvap[™] technology helps control humidity levels in the home when used with a compatible humidity control system.
- On-board NFC antenna makes setup a tap away when using the CarrierBryant Service Technician App.
- 3 Digit Display shows fault codes and furnace status.
- RAT and SAT thermistors can provide temperature rise.
- · Aluminized-steel primary heat exchanger.
- · Stainless-steel condensing secondary heat exchanger.
- Fully-insulated casing including blower section.

INSTALLATION FLEXIBILITY

- 4-way multipoise design for upflow, downflow or horizontal installation, with unique vent elbow and optional through- the-cabinet downflow venting capability.
- Ideal height 35-in. (889 mm) cabinet: short enough for taller coils, but still allows enough room for service.
- Direct-vent/sealed combustion, single-pipe venting or ventilated combustion air.

APPLICATIONS

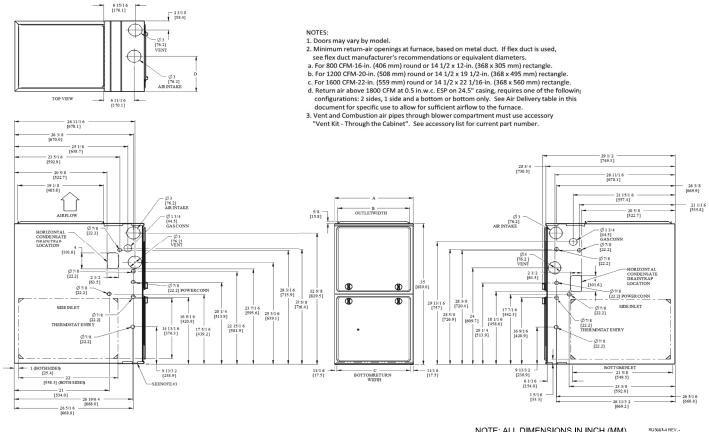

- Self-diagnostics and extended diagnostic data through the Advanced Product Monitor (APM) accessory or Infinity User Interface.
- · Propane convertible with gas conversion accessory
- Convenient Air Purifier and Humidifier connections.
- Compatible with single- and multiple-zone Infinity systems.

CERTIFICATIONS

- All sizes meet ENERGY STAR® Version 4.1 criteria for gas furnaces: 95%+ AFUE.
- Cabinet air leakage less than 2.0% at 1.0 in. w.c. and cabinet air leakage less than 1.4% at 0.5 in. w.c. when tested in accordance with ASHRAE standard 193.

MODEL NUMBER NOMENCLATURE

For California Residents:

For installation in SCAQMD only: This furnace does not meet the SCAQMD Rule 1111 14 ng/J NOx emission limit, and thus is subject to a mitigation fee of up to \$450. This furnace is not eligible for the Clean Air Furnace Rebate Program: www.CleanAirFurnaceRebate.com

MINIMUM CLEARANCES TO COMBUSTIBLE MATERIALS

*. Consult your local buildin codes

†. Recommended

The furnace should be sized to provide 100 percent of the design heating load requirement plus any margin that occurs because of furnace model size capacity increments. None of the furnace model sizes can be used if the heating load is 20,000 BTU or lower. Use Air Conditioning Contractors of America (Manual J and S); American Society of Heating, Refrigerating, and Air-Conditioning Engineers; or other approved engineering method to calculate heating load estimates and select the furnace. Excessive oversizing of the furnace may cause the furnace and/or vent to fail prematurely, customer discomfort and/or vent freezing.

Failure to follow these guidelines is considered faulty installation and/or misapplication of the furnace; and resulting failure, damage, or repairs may impact warranty coverage.

*. Gas input ratings are certified for elevations to 2000 ft. (610 M). In USA, For elevations above 2000 ft (610 M), reduce ratings 4 percent for each 1000 ft (305 M) above sea level. Refer to National Fuel Gas Code NFPA 54/ANSI Z223.1 Table F.4 or funcae installation instructions.
†. Capacity in accordance with U.S. Government DOE test procedures.
‡. Airflow shown is for bottom only return-air supply for the as-shipped speed tap. For air delivery above 1800 CFM, see Air Delivery table for other options. A filter is required for each return-air supply. An airflow reduction of up to 7 percent may occur when using the factory-specified 4-5/16-in. (110 mm) wide, high efficiency media filter.
**. See Accessory List for part numbers available.

*. Low Cooling Default

†. High Cooling Default
 †. Constant For Default Not Recommon

Constant Fan Default Not Recommended
 **. Max Cooling values are test CFM all other airflows are standard CFM

For Heating Settings

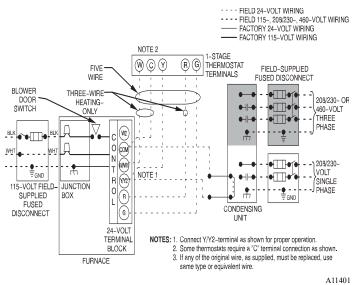

Eff1 airflow will give midpoint rise

Eff2 will increase heating airflow (when unit is capable)

Com2 will decrease heating airflow (defaults)

Com1 will give the lowest heating airflow

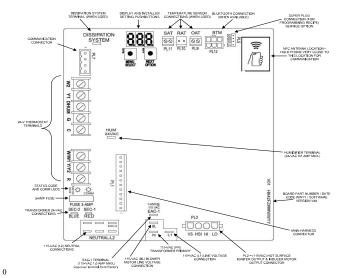

TYPICAL WIRING SCHEMATIC

Notes:

ESP is External Static Pressure Airflow values up to 1 in. w.c. ESP (unless noted)

Maximum Equivalent Vent Length - Ft.

NOTE:

1.Inducer Outlet Restrictor disk (P/N 337683-401; 1.25-in. (32 mm) Dia.) available through Replacement Components required for no greater than 5-ft. (1.5 M) TEVL in downflow and horizontal orientations only. Required for installations from 0-2000 ft. (0 to 610 M) above sea level.

 Inducer Outlet Restrictor disk (P/N 337683-402; 1.50-in. (38 mm) Dia.) available through Replacement Components required for no greater than 5-ft. (1.5 M) TEVL in downflow and horizontal orientations only. Required for installations from 0-2000 ft. (0 to 610 M) above sea level.

NOTES:

1. Use only the smallest diameter pipe possible for venting. Over-sizing may cause flame disturbance or excessive vent terminal icing or freeze-up.

2. NA - Not allowed. Pressure switch will not close, or flame disturbance may result.

3. Vent sizing for Canadian installations over 4500 ft. (1370 M) above sea level are subject to acceptance by the local authorities having jurisdiction.

4. Size both the combustion air and vent pipe independently, then use the larger size for both pipes.

5. Assume the two 45° elbows equal one 90° elbow. Wide radius elbows are desirable and may be required in some cases.

6. Elbow and pipe sections within the furnace casing and at the vent termination should not be included in vent length or elbow count.

7. The minimum pipe length is 5 ft. (2 M) linear feet (meters) for all applications.

8. Use 3-in. (76 mm) diameter vent termination kit for installations requiring 4-in. (102 mm) diameter pipe.

9. A running Tee in the Combustion Air Pipe adds 0 ft. to the TEVL of the vent length.

Venting System Length Calculations

The Total Equivalent Vent Length (TEVL) for **EACH** combustion air or vent pipe equals the length of the venting system, plus the equivalent length of elbows used in the venting system from Maximum Equivalent Vent Length.

Standard vent terminations or factory accessory concentric vent terminations count for zero deduction.

See vent system manufacturer's data for equivalent lengths of flexible vent pipe or other termination systems. **DO NOT ASSUME** that one foot of flexible vent pipe equals one foot of straight PVC/ABS DWV vent pipe.

Compare the Total Equivalent Vent Length to the Maximum Equivalent Vent Lengths Table.

Example 1

A direct-vent 60,000 BTUH furnace installed at 2100 ft. (640M). Venting system includes FOR EACH PIPE:

70 feet (22 M) of vent pipe, 65 feet (20 M) of combustion air inlet pipe, (3) 90° long-radius elbows, (2) 45° long-radius elbows, and a factory accessory concentric vent kit.

Can this application use 2" (50 mm ND) PVC/ABS DWV vent piping?

| Measure the required linear length of air inlet and vent pipe; insert the longest of the two here | | | | | 70 ft. (22 M) | Use length of the longer of the vent or air inlet piping system |
|---|---|-----|--------------------|-----|------------------|--|
| Add equiv length of (3) 90° long-radius elbows (use the highest number of elbows for either the vent or inlet pipe) | 3 | x | 3 ft. (0.9 M) | = | 9 ft. (2.7 M) | From Deductions from Maximum Equivalent Vent Length |
| Add equiv length of (2) 45° long-radius elbows (use the highest number of elbows for either the vent or inlet pipe) | 2 | x | 1.5 ft. (0.5 M) | = | 3 ft. (0.9 M) | From Deductions from Maximum Equivalent Vent Length |
| Add equiv length of factory concentric vent term | | | | | 0 ft. | From Deductions from Maximum Equivalent Vent Length |
| Add correction for flexible vent pipe, if any | | | | | 0 ft. | From Vent Manufacturer's instructions; zero for PVC/ABS DWV |
| Total Equivalent Vent Length (TEVL) | | | | | 82 ft. (25 M) | Add all of the above lines |
| | 1 | 1 1 | | 1 1 | 05.4 | |
| Maximum Equivalent Vent Length (MEVL) | | | | | 95 ft. (29 M) | For 2" pipe from Maximum Equivalent Vent Length |
| Is TEVL less than MEVL? | | | | | YES | Therefore, 2" pipe MAY be used |

Example 2

A direct-vent 60,000 BTUH furnace installed at 2100 ft. (640M). Venting system includes FOR EACH PIPE:

100 feet (30 M) of vent pipe, 95 feet (29 M) of combustion air inlet pipe, (3) 90° long-radius elbows, and a polypropylene concentric vent kit. Also includes 20 feet (6.1 M) of flexible polypropylene vent pipe, included within the 100 feet (30 M) of vent pipe.

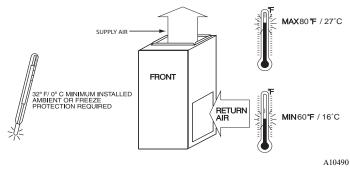

VERIFY FROM POLYPROPYLENE VENT MANUFACTURER'S INSTRUCTIONS for the multiplier correction for flexible vent pipe.

Can this application use 60mm o.d. (2") polypropylene vent piping? If not, what size piping can be used?

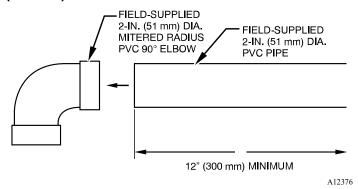

| ean this application use commode. (2-) polyprop | • | • • | . | mat 512 | | - |
|---|------------|-------------|--------------|---------------------------------------|------------------|--|
| Measure the required linear length of RIGID air inl | | | | = | 80 ft. | Use length of the longer of the vent |
| longest of the two here: 100 ft. Of rigid pipe | - 20 ft. C | Of flexible | e pipe | | (24 M) | or air inlet piping system |
| Add equiv length of (3) 90° long-radius elbows (use the highest number of elbows for either the | 3 | Y | 5 ft. | = | 15 ft. | |
| vent or inlet pipe) | 3 | х | (1.5 M) | _ | (4.6 M) | |
| Add equiv length of 45° long-radius elbows | | | | | 0 ft. | Evenue from nelveronylane vent |
| (use the highest number of elbows for either the vent or inlet pipe) | 0 | x | | = | (0 M) | Example from polypropylene vent manufacturer's instructions, Verify from vent |
| | <u>^</u> | | 3.3 ft | | 30 ft. | manufacturer's instructions. |
| Add equiv length of factory concentric vent term | 9 | х | (0.9 M) | = | (9 M) | |
| Add correction for flexible vent pipe, if any | 2* | x | 20 ft. | = | 40 ft. | |
| Add correction for headble vent pipe, if any | 2 | ^ | (6.1 M) | _ | (12.2 M) | |
| * VERIFY FROM VENT MANUFACTURER'S IN | STRUC | tions; i | or example | e only, a | assume 1 meter o | of flexible 60mm (2") or 80mm (3") polypropylene |
| | pipe eo | quals 2.0 |) meters (6. | 5 ft.) of | PVC/ABS pipe. | |
| Total Equivalent Vant Langth (TEV/L) | | | | | 165 ft. | Add all of the above lines |
| Total Equivalent Vent Length (TEVL) | | | | | (50 M) | Add all of the above lines |
| | | 1 | 1 | | | |
| Maximum Equivalent Vent Length (MEVL) | | | | | 95 ft. | For 2" pipe from Maximum Equivalent Vent |
| | | | | | (29 M) | Length |
| Is TEVL less than MEVL? | | | | | NO | Therefore, 60mm (2") pipe may NOT be used; try 80mm (3") |
| | | | 1 | , , , , , , , , , , , , , , , , , , , | 105.0 | |
| | | | 1 | | 185 ft. | For 3" pipe from Maximum Equivalent Vent |
| Maximum Equivalent Vent Length (MEVL) | | | | | | |
| Maximum Equivalent Vent Length (MEVL) Is TEVL less than MEVL? | | | | | (57 M) YES | Length Therefore, 80mm (3") pipe MAY be used |

RETURN AIR TEMPERATURE

This furnace is designed for continuous return-air minimum temperature of 60°F (15°C) db or intermittent operation down to 55°F (13°C) db such as when used with a night setback thermometer. Return-air temperature must not exceed 80°F (27°C) db. Failure to follow these return air limits may affect reliability of heat exchangers, motors and controls.

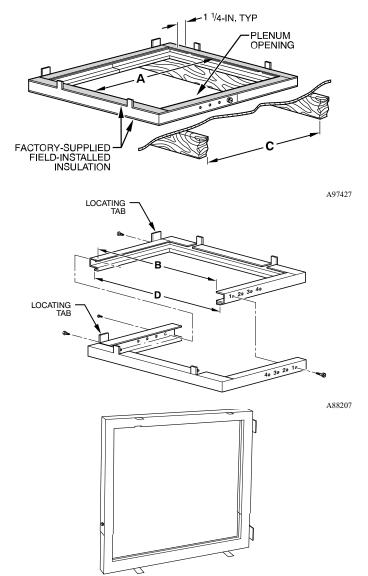

COMBUSTION-AIR PIPE FOR NON-DIRECT (1-PIPE) VENT APPLICATION

NOTE: See Installation Instructions for specific venting configurations.

DOWNFLOW SUBBASE

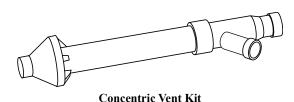

Downflow Subbase

A88202 One base fits all furnace sizes. The base is designed to be installed between the furnace and a combustible floor when no coil box is used or when a coil box other than the manufacturer's cased coil is used. It is CSA design certified for use with the manufacturer's branded furnaces when installed in downflow applications.

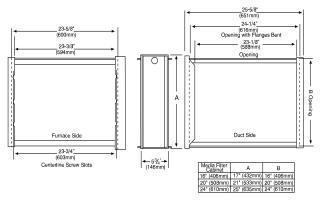

| | DIMENSIONS (IN. / MM) | | | | | | | | | | | |

*. The plenum should be constructed 1/4-in. (6 mm) smaller in width and depth than the plenum dimensions shown above.

A93086 A concentric vent kit allows vent and combustion-air pipes to terminate through a single exit in a roof or side wall. One pipe runs inside the other allowing venting through the inner pipe and combustion air to be drawn in through the outer pipe.

MEDIA FILTER CABINET (OPTIONAL ACCESSORY)

NOTE: Media cabinet is matched to the bottom opening on furnace. May also be used for side return
