

## Universal Test Kit

- Rapid on-site analysis of central heating system water
- Simple colour charts for measuring concentrations
- Tests for major parameters affecting water quality

### Universal Test Kit

The Fernox Universal Test Kit is designed to give rapid on-site analysis of the major water parameters that can affect the life span of a central heating system.

This test kit is supplied with all equipment and reagents required to determine turbidity, pH, Fernox Protector levels and water hardness. All tests are suitable for use with water containing Fernox Protectors.

Test strips are provided for pH and hardness tests. A simple drop test is used for measuring the levels of Fernox Protector. Test methods are very simple to understand and easy to use and do not require any formal training.

Replacement reagents for this test kit are available from our sales office on 0330 100 7750.

A comprehensive range of postal laboratory testing services are available to compliment the Universal Test Kit. For further details please call Fernox Technical Services on 0330 100 7750.

### BS 7593:2019

The Universal Test kits allows compliance with BS 7593:2019 which recommends annual servicing of heating systems to ensure correct concentration of corrosion inhibitor.
