\* Transformer required for a multiple heater installation:

- The first heater requires 40 VA and each additional heater 20 VA
- The sum total will be the required rating of the system or zone Transformer
- If total VA required is between transformer rating sizes, select the next higher VA rated transformer.

**MODEL 2152 2-STAGE CONTROL**

2-Stage model heater(s) 2152 must be controlled using "OFF-ON-ON" switch sequence. This sequence is necessary for heater operation. Schwank offers the following control switch options with brushed stainless steel wall plate:

JM-0201-TS   
Control one 2-stage heater or one zone of up to 4 heaters.  
QUANTITY:

JM-0202-TS   
Control two 2-stage heaters or two zones up to 4 heaters/zone.  
QUANTITY:

JM-0203-TS   
Control three 2-stage heaters or 3 zones up to 4 heaters/zone.  
QUANTITY:

**MINIMUM CLEARANCE TO COMBUSTIBLES**

Note: Ensure mounting height in any location is sufficient to prevent patrons from coming in contact with heater, and clearance to combustible material is maintained.

**Do not mount less than 8 ft [2438 mm] above floor.**

**Do not store or place anything directly under heater**

Notes:

1. The clearance to combustible material represents the minimum distance that must be maintained between the outer heater surface and a nearby surface. The stated clearance to combustibles represents a surface temperature of: **Indoor** = 90F° (50C°) above room temperature; **Outdoor** = 117F° (65C°) above ambient temperature.
2. It is the installer’s responsibility to ensure that building materials with a low heat tolerance which may degrade at lower temperatures are protected to prevent degradation. Examples of low heat tolerance materials include awnings, vinyl siding, fabrics, some plastics, filmy materials, etc.
