NOTE: (1) Electronic thermostats have amperage minimums and each model has different voltage requirements, please check catalog thermostat specifications. (2) FRC AND VFK Series models require the removal of the internal thermostat and wire wall thermostat in its place for proper fan operation. See model selection for specific thermostat. (3) SRA and FRA Series models require the removal of the internal thermostat from unit. Wire wall thermostat for proper fan operation. See model selection for specific thermostat. (4) CRA Series models require the removal of the internal thermostat from unit. Wire wall thermostat for proper fan operation. See model selection for specific thermostats. (4) CRA Series models require the removal of the internal thermostat from unit. Wire wall thermostat for proper fan operation. See model selection for specific thermostats. (5) Low voltage thermostats operate in conjunction with low voltage control systems using relays. Compatible with all standard 24V two wire thermostats can accept analog signal of 0-10 VDC. (6) The 1100 watt units can use either single-pole or double-pole thermostats. The 1500 watt units must use a double-pole thermostat. (three conductors from thermostat to unit). Does not apply to low voltage thermostats. (7) FFCH and QFF Series models require different thermostats based on internal wiring. Wire wall thermostat for proper fan operation. See model selection for specific thermostats. Can not use digital thermostats with this unit. (8) Due to the complexity of wiring variations for remote wall thermostats with these products, we recommend that you contact Technical Services for assistance.
